

Report for week ending 01-24-03

1. FAST now resides on the LCE San Diego server and will shortly be available for demonstration on a username and password basis.
2. The assessor assignment function is now working with expanding menus and representative names of FTSC personnel.
3. We were unable to run FAST on the FTSCCLANT server due to a problem with the server. Keith did however load FAST on another computer at FTSCCLANT.
4. Keith fixed many of the calendar and scheduling bugs discovered during the demos this week and last.
5. Chandler Gable has been working to populate the Standard Statement drop-down menu with the relational database of standard statements. This should be operational in a couple weeks.
6. This week we demo'd the program for COMNAVAIRPAC N43 personnel. They liked the functionality and had some good suggestions about the user interface. Our demo for RADM Brooks scheduled for Thursday, January 30th.
7. Monday, Keith will spend some time with the folks in FTSCPAC Code 402 to determine their requirements for the Configuration and Order Parts modules.

Best regards,

John Spencer
