

Report for week ending 01-03-03

1. The user can now select the systems to be assessed and then select the day(s) that assessment will take place and the lead technician to perform the assessment. FAST will then display this information in a "Week-at-a-Glance" format.
2. We conducted a second demonstration for Terry Couch and CDR Stanko on January 3rd and received good feedback that we are incorporating for the January 8th demo in Norfolk.
3. There are now drop down menus for the standard problem statements and standard corrective actions on the 2-Kilo form.
4. Keith will be traveling to Norfolk on Monday, January 6th in order to work with FTSCCLANT to install FAST on the FTSCCLANT server prior to our January 8th demo.
5. Keith Conway made a lot of progress on the user interface in preparation for the January 8th demonstration in Norfolk.
6. We continue to make good progress on FAST documentation.

Best regards,

John Spencer
